

My webMethods Server - Is there any way to dynamically create data in MWS Application Navigate from java code in Designer.

KB #:	1738883	Operating System Family:	PC
Product:	My webMethods Server (MWS)	Operating System:	Windows XP Professional
Version:	8.0		
Last Updated:	14-NOV-2013		

Description:

I have a requirement in my application to dynamically create (show) data as a menu in MWS Navigate. For e.g.:- In a project Management application, each time a new project is created, its name should be listed in MWS Navigate under that application, so that the user can see it in MWS Navigate.

Is there any way to achieve this dynamically from Designer Code? I.e. each time a new data is created in Designer code, is there any way to list it in MWS Navigate?

Resolution:

Is there any way to dynamically create data in MWS Application Navigate from java code in Designer?

Yes, it is possible to add items to the Left Hand Side Navigation tree (LHS) programmatically; however, that tree is backed by a simple folder hierarchy in MWS.

The item in the navigation tree is a folder that is displayed when the user clicks on that item. This content would also need to be created.
