webMethods Jasper Package

The objective of this project is to enable seamless integration between webMethods and the jasper intelligence suite. It allows pixel perfect reporting solutions with complex data integration requirements to be developed in minutes.

Pre Requisites:

- webMethods integration server and developer 6.5
- iReport 2.0.5

In order to get the examples running simply install the following packages on wM 6.5:

- wmBI package
- GGPackage

and then follow this video demonstration. Ensure you are using the same file locations and naming as the demo. Once you are confident with the examples try to add a new report.
